DETAILED ACTION

Election/Restrictions

- 1. Claims 3-5, 8-11, 13-18, 20-34, 36-41, 44-47, and 49 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected Species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on September 17, 2007. However, claim 12 is withdrawn from further consideration for depending on the withdrawn claim 11.
- 2. Applicant's election with traverse of Species in the reply filed on September 17, 2007 is acknowledged. The traversal is on the ground(s) that the Species disclose the key element of unity of the membrane. This is not found persuasive because in the specification and drawings, the Applicant has disclosed the different technical features that are associated with each Species as described by the Examiner in the Requirement for Restriction dated August 15, 2007.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claim7 and 49 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 7 and 49 recite the limitation "the

Application/Control Number:

10/510,341 Art Unit: 3752

microporous membrane" in lines 1 and 2. There is insufficient antecedent basis for this limitation in the claims.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 1, 2, 19, 42 are rejected under 35 U.S.C. 102(b) as being anticipated by Martin et al.

Martin et al discloses a device 10 comprising a base 12 with at least one volatile active agent 14 housed in a reservoir, at least one wall of which comprises a wicking membrane 16 that is fusion to the reservoir (see column 3, line 66).

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 6, 7, and 43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Martin et al. in view of Young et al.

Martin et al. teaches all the limitations of the claims except for a matrix of linear ultrahigh molecular weight polyolefin, a very large proportion of finely divided particulate

siliceous filler, and a high void content. However, Young et al. discloses a matrix of linear ultrahigh molecular weight polyolefin, a very large proportion of finely divided particulate siliceous filler with a high void content such as Teslin®. Therefore, it would have been obvious to one having ordinary skill in the art to have provided the device of Martin et al. with the microporous membrane such as Teslin® as suggested by Young et al. Doing so would provide a way for dispensing a volatile material.

Page 4

Furthermore, at the time the invention was made, it would have been an obvious matter of design choice to a person of ordinary skill in the art to provide the device of Martin et al. with a matrix of linear ultrahigh molecular weight polyolefin, a very large proportion of finely divided particulate siliceous filler, and a high void content, because Application has not disclosed that the matrix of linear ultrahigh molecular weight polyolefin, a very large proportion of finely divided particulate siliceous filler, and a high void content provides an advantage, is used for a particular purpose, or solves a stated problem.

Conclusion

- 9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to show the art with respect to a device for dispensing a volatile material: Kunze et al, and Gordon et al.
- 10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dinh Q. Nguyen whose telephone number is 571-272-4907. The examiner can normally be reached on Monday-Thursday 6:00-4:30.
